

NEWS RELEASE

FOR IMMEDIATE RELEASE

27 February 2008

**A simple blood test can now be used to help identify
a wide range of diseases**

A simple biomarker blood test now can be used to aid in the identification of many diseases and conditions including cardiovascular disease, cancer, metabolic disorder, autoimmune disease, viral and bacterial diseases, hormonal imbalances and nutritional problems.

Biophysical250, provided exclusively in the UK by Westover Clinics, tests over 250 biomarkers. Biomarkers are proteins or chemicals found in the blood (like glucose and cholesterol) and the appearance of specific biomarkers or changes in these biomarkers' levels, can be an indication of ill health or developing illnesses.

Through early identification of abnormal levels of specific biomarkers, the doctor can take action to stop the development of more serious conditions and diseases, through a personalised healthcare programme.

Dr. Amber Kennard, CEO of Westover Clinics, said: "Biophysical250 is an enormously powerful assessment. With a simple blood test we are able to provide patients with a comprehensive health check. As well as testing for existing diseases, the presence of specific biomarkers may indicate a developing disease that are not typically looked for in standard health checks. The results from these tests enable Westover to provide advice on lifestyles changes that may then avoid the need for more serious medical or surgical interventions at a later stage."

Before taking the Biophysical250 test, patients have a consultation to take a complete medical history. The blood sample is then sent to the USA for laboratory analysis using a battery of tests to assess 60 biomarkers commonly used in general medicine, 80 biomarkers used in 12 medical specialties and 110 biomarkers that are primarily used in medical research.

The results of the tests are provided to the patient approximately 15 days following their blood draw, during a full consultation with a Westover general practitioner trained and experienced in assessing the implications of this full range of tests. Medical advice and specialist referrals are then made by the GP and a comprehensive, easy-to-read report analyzing all the Biophysical250 biomarkers is then given to the patient for their own reference. The test costs £2,200 and is available exclusively within the UK at Westover's Brompton Cross Clinic.

Westover Clinics are the leading provider of personalised, proactive healthcare management and provide the highest standards of medical care including GPs, dentistry, specialist consultant medical practitioners and complimentary therapies on a membership basis. There are a range of membership schemes to suit a range of personal and family circumstances: individual medical membership which provides unlimited GP access costs just £45 per month.

Biophysical250 monitors biomarkers used to help identify breast, colon, liver, ovarian, prostate and pancreatic cancers, diabetes, metabolic syndromes, mononucleosis, pneumonia and vitamin and protein deficiencies.

About Westover Clinics

Westover Clinics was founded by Dr Amber Kennard in Spring 2006 and now operate a growing chain of primary healthcare clinics delivering a new concept in primary medical care, providing patients with a full range of the highest-quality health services all under one roof on a membership basis.

Westover provide general practitioners, consultant medical specialists and surgeons, dentists and complimentary therapists at its purpose-built and newly-equipped clinics in Brompton Cross, Wandsworth and Notting Hill, as well as specialist "Mother & Child" facilities at its Westover Women's Centre in Chelsea.

Westover provide a patient-centred service with convenient opening hours in local neighbourhood clinics where medical and complimentary services can be used in an integrated, holistic pattern of healthcare provision: truly excellent health services for busy families as they need them, when they need them - allowing them to manage their health pro-actively.

About Biophysical Corporation

Biophysical Corporation is a private, Austin, Texas-based company dedicated to advancing clinical knowledge and quality of life for its clients. Formed in 2004, the company offers Biophysical250, the most comprehensive and advanced assessment of personal health. Through the innovative analysis of blood-based biomarkers, Biophysical250 may indicate the presence or risk of cancer, cardiovascular disease and other health risks often before symptoms appear. The company's management and advisory board includes internationally renowned physicians and scientists who are leaders in the field of biomarker research. More information about the company and Biophysical250 is available at www.biophysicalcorp.com.
